

Aureus Core Token

1. BASIC DETAILS

Token name: Aureus Core

Token symbol (ticker): ARC

Total supply: 10B ARC

Decimal: 18

Token standard: ERC-20

Blockchain: Ethereum

Token Type: Utility Token

Contract Name: AureusCoreToken

Compatibility: Wallets, Exchanges, and Explorers.

2. TOKEN REQUIREMENTS

- 5B tokens unlocked
- 5B tokens locked

Lock must be:

1. On-chain
2. Transparent
3. Verifiable
4. Controlled by Foundation

Unlocked date:

- October 28, 2028
-

3. SECURITY REQUIREMENTS

Contract must contain:

- No hidden mint
- No admin backdoors
- No blacklist
- No whitelist
- No taxes
- No fees
- No reflection
- No burn
- No upgradeability
- No transfer restrictions
- No unauthorized ownership
- No unauthorized control logic

4. OPENZEPPELIN SECURITY STANDARDS

The smart contract must be implemented using **OpenZeppelin Contracts (latest stable version)** as the security baseline.

Requirements:

- ERC-20 implementation must use OpenZeppelin ERC20
- Ownership handled via Ownable
- Safe math handled internally (Solidity ^0.8.35)
- No custom reimplementations of core token logic
- Must follow OpenZeppelin security patterns and best practices

- Contract must be compatible with standard auditing tools used on OpenZeppelin-based systems

OpenZeppelin modules:

1. ERC20
2. Ownable
3. SafeERC20
4. ReentrancyGuard

5. Deployment Process

- Deployment and test on **Sepolia**
- Internal testing + security review
- Fixed issues
- Deployment to **Ethereum Mainnet**
- Verify on Etherscan
- Transfer ownership to Foundation wallet

6. Deliverables

- Source code
- OpenZeppelin Information
- Sepolia deployment information
- Mainnet deployment information
- Contract address
- Ownership transfer confirmation
- Verification details
- Security review summary by developer
- Technical architecture documentation

- Architecture documentation
- Instructions
- Audit report by Claude AI
- Auto audit checks by Binance Web3 Wallet
